Objective

Aspiring QA Game Tester and dedicated mid-core gamer with deep familiarity in shooter games and a strong attention to detail. Although I'm still new to testing, joining your team would be an incredible opportunity to learn, grow, and contribute from the beginning of my professional journey-especially with my passion and experience in shooter games like BGMI, COD, and PUBG. I am also open to internship opportunities in Game Design or Game Development to expand my skills and grow into a broader role within the game development pipeline.

Education

Bachelor of Computer Applications (BCA - General)
Kristu Jayanti College, Bengaluru
Expected Graduation: 2025

Gaming Experience & Skills

- Mid-Core/Hard-Core Gamer with years of experience in titles like BGMI, PUBG, COD Mobile, and Free Fire
- Passionate about game mechanics, player psychology, and identifying key areas for improvement or enhancement in gameplay
- Strong analytical ability to understand player sentiment and gameplay frustration factors
- Capable of writing detailed test cases and structured bug reports
- Familiar with QA principles, software testing life cycle, and theoretical knowledge of tools like Jira
- Proactive team player, values ownership, clarity, and creative problem-solving
- Comfortable working in collaborative game dev environments with design, dev, and level teams

Technical Skills & Tools

- Game Engines: Familiar with Unity and Unreal Engine, currently working on small game projects (in progress)
- Programming/Scripting: Basic understanding through BCA coursework and self-learning

- Bug Tracking & Docs: Theoretical knowledge of Jira and Google Docs, currently learning both actively
- Platforms Tested: Android and PC-based gaming environments

Projects & Learning

Unreal & Unity Practice Projects (In Progress)

- Experimented with basic mechanics like character movement, shooting, health systems, and level design
- Currently working on personal shooter-based prototypes in Unity and exploring blueprint scripting in Unreal Engine
- These projects have helped build a strong foundation in game logic, scene setup, and iteration processes

Gameplay Analysis Logs

- Maintained structured gameplay reports from competitive titles to simulate bug reporting and feedback loops
- Focused on player flow, frustration points, and improvement suggestions-aligning with real-world QA practices

Strengths & Traits

- Strong writing and documentation skills for bug reports and test summaries
- Fast learner with hands-on curiosity about both gameplay and technical systems
- Aligned with LILA Games' no-politics, high-transparency culture
- Open to relocation and extended learning opportunities
- Eager to build experience through QA, and internship roles in Game Design or Development

Additional Information

- Familiar with LILA Games' Business Values and excited to contribute in any capacity-testing, design, or development
- Willing to work hard, iterate fast, and grow with the team
- Looking forward to collaborating on world-class shooter experiences for players
